Following the success of the award-winning *TableMike* series, chosen as the “*Best microphone*” in its category by the American leading computer magazine *MacWorld* and others (http://www.macworld.com/article/1167380/usb_6_in_1_tablemike_great_for_mac_speech_recognition.html), the second-generation **TwistMike** features the SAME highly sensitive and unidirectional capsule of the *TableMike* inside an extremely 30" or 75 cm long, thin (7 mm) but at the same time:

- stiffer, lightweight and easy to bendable microphone boom,
- attached to a detachable mini XLR 3.5 mm golden plated jack in order to eventually connect the **TwistMike** to our award-winning *TableMikes*
- and a detachable and heavier clamp, for better stability when used as a desktop microphone.

Besides, the clamp has now a special shape to fit not only on flat surfaces, but also to wheelchairs and tubes, which has been a constant request from first-generation users...

Due to the aforementioned unique features, the *TwistMike* will provide an outstanding long-range and effective dictation distance up to 1.5 m with *Dragon NaturallySpeaking v. 15* (!) when it is connected to the acoustically matched *SpeechWare USB MultiAdapter* running under Green LED or mode.

The special detachable clamp, as well as the lightness and flexibility of the boom, allow also to wear the microphone around the neck, as well as to wind it on top of any flat surface or table, as shown in the following pictures:

The *TwistMike* package comes bundled with:

- the special detachable clamp to attach the microphone to any table up to 9 cm thick
- the detachable cable with a professional mini-XLR audio connector, compatible with the *TableMikes*
- the windscreen.

Advantages of the *TwistMike*

- Four working modes: (1) attached to a table (with the clamp), (2) winded on top of any flat surface, (3) around the shoulders (without the clamp) and (4) attached to a *TableMike* base
- Highly sensitive unidirectional cardioid microphone capsule, the same as the award-winning *TableMikes*
- Outstanding voice pick up directionality, which is essential for speech recognition accuracy
- Extremely long (30" or 75 cm), thin (6 mm), lightweight and easy to bend microphone boom, attached to a standard 3.5 mm golden plated jack and special detachable clamp
- Ideal complement for existing *SpeechWare USB MultiAdapter* owners, providing them with identical performance as the award-winning *TableMike* models
- Ideal optional and much longer boom for any *TableMike* users, thanks to the compatible and detachable mini XLR connector.

Further commercial information about the *TwistMike* – UTSM

UPC-A Code: 718179630309
